

ENERGY AND ENVIRONMENT MANAGEMENT SYSTEM OF BRIDGESTONE France (BSFR)

Energy policy of BSFR:

Our manufacturing plant in Bethune (BSFR-M), as well as our commercial division in Massy (BSFR-S), aim at managing and improving its energetic performances daily, during all the activities of production, promotion and sale of tires.

Therefore, we focus on the following:

1. Respect all internal & external exigencies that apply to our activities in terms of energy
2. With the limit of acceptable economic conditions, implement actions to manage and improve our energy consumptions, in order to achieve the goals and targets that we set up :
 - Starting from the equipment design of our machines as well as the goods and services purchasing process,
 - Covering the consumptions of the plant and commercial activities, as far as our company has a significant influence.
3. Train and motivate our workforce and include our partners and external stakeholders.
4. Continuously improve this approach, following the principles of ISO 50001 standard.

Managing director - Sales division

Managing director - Manufacturing division
Philippe BURNAGE

Environmental policy of BSFR-M:

Protect the environment for the present and next generations, to assure a sustainable future to our society.

In addition to our energy policy, Bethune plant also committed since years to:

1. Respect all laws & regulations that apply to the site, all official requests of the group & exigencies from external third parties in terms of environment.
2. Respect nature, our workforce & neighbourhood, avoiding pollutions & reducing our negative impacts on:
 - The ground, the air and the water resource & biodiversity,
 - Energy and natural resources consumptions,
 - Noise, vibrations and all pollutions that could be felt out of the site premises, in the limit of acceptable economic conditions.
3. Inform & train all employees in environmental protection, to help them to reach the objectives & targets that have been set up locally. Follow & promote all actions implemented to succeed.
4. Favour green technologies, products & services that have low energy impact, in respect with environment.
5. Reduce waste quantity & improve its management, to ensure reusing or recycling solutions instead of storage in a landfill.
6. Communicate out of the plant the principles of this policy & associate our suppliers & subcontractors to this commitment.
7. Implement actions or participate to local projects based on social, economic & environmental respect & enhancement.
8. Continuously improve our approach, following the principles of ISO 14001 standard.
